

Renewables in Cities 2019 Global Status Report

Webinar

Lea RANALDER

18 February 2020

REN21: the only global renewable energy multi-stakeholder community

INTERGOVERNMENTAL ORGANISATIONS

ADB, APERC, ECREEE, EC, GEF, IEA, IRENA, IsDB, RCREEE, UNDP, UN Environment, UNIDO, World Bank

GOVERNMENTS

Afghanistan, Brazil, Denmark, Dominican Republic, Germany, India, Mexico, Norway, Republic of Korea, South Africa, Spain, UAE, USA

NGOs

Club-ER, CLASP, CCA, CAN-I, CEEW, Energy Cities, FER, Global 100% RE, GFSE, GWNEN, Greenpeace Intl, ICLEI, ISEP, IEC, JVE, MFC, SLoCaT, Power for All, REEEP, REI, SCI, WCRE, WFC, WRI, WWF

INDUSTRY ASSOCIATIONS

AMDA, ARE, ACORE, APREN, ALER, CREIA, CEC, EREF, GOGLA, GSC, GWEC, IREF, IGA, IHA, RES4Africa, WBA, WWEA

SCIENCE & ACADEMIA

AEE INTEC, Fundacion Bariloche, Higher School of Economics (Russia), IIASA, ISES, NREL, SANEDI, TERI

REN21: WHAT WE DO

Debates

23-25 October 2019

Renewables in Cities 2019 Global Status Report

First annual stocktake of renewable energy in cities

The report features:

1. Cities in the Renewable Energy Transition
2. Drivers for Renewable Energy in Cities
3. Urban Policy Landscape: Targets and Policies
4. Urban Renewable Energy Markets
5. Mobilising Finance and Enabling Business Models
6. Citizen Participation

380

experts contributed to the REC-GSR, working alongside an international authoring team and the REN21 Secretariat

61%

of contributors are new members of the REN21 Community, indicating the attractiveness of this focus on cities in the energy transition

More than

50

interviews were conducted with city or sector-specific experts from around the world

Cities in the world

Bring cities to the energy debate, the energy debate to cities

Cities account for three-quarters of human-caused global carbon dioxide emissions.

Energy consumption

Cities account for an estimated

One billion people living in urban slums

City definitions differ

Japan: **50,000** inhabitants
Norway: **200** inhabitants

Distribution of megacities in the world

Cities with more than 10 million inhabitants

Population
55% of the world's population, (or **4.2 billion** people) lives in cities

GDP
80% of global GDP is generated in cities

Cities cover 3,629,312 km², or 2.8% of global land area

Beyond power

Over 80% of demand for heating, cooling and transport

- Globally, around 26% of electricity is renewable
- Renewables lagging behind in heating, cooling and transport
- **Heating and cooling**
 - approx. 50% buildings / 50% industry
 - local markets
- **Urban transport:** 40% of final energy in transport sector

Renewable Energy in Total Final Energy Consumption, by Sector, 2016

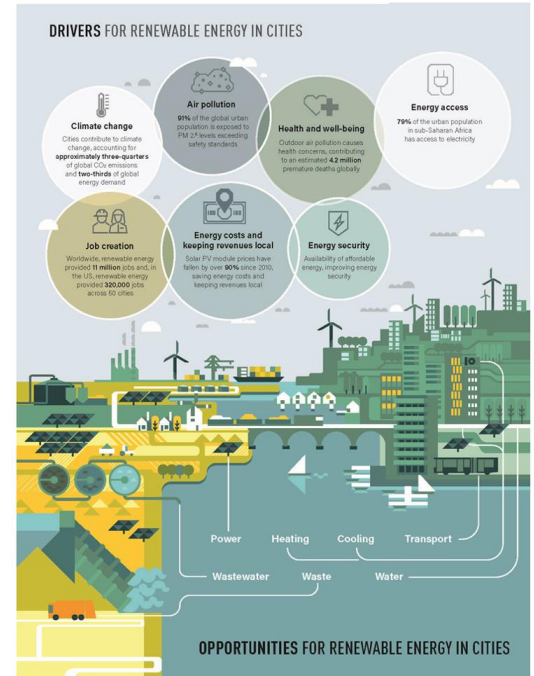

Note: Data should not be compared with previous editions of the Renewables Global Status Reports. Electricity also supplies final energy demand in the heating and cooling sector (71% in 2016), and transport sector (11% in 2016). Source: Based on OECD/IEA.

Drivers for renewable energy

Cities pursue renewables to meet a range of objectives

- Climate change
- Ensuring healthy living environment - addressing air pollution
- Reducing municipal costs
- Economic development
- Local jobs
- Energy security
- Access to energy

Drivers and Opportunities for Urban Renewable Energy

REN21 RENEWABLES IN CITIES 2019 GLOBAL STATUS REPORT

Cities have a direct responsibility for their residents

Cities have ambitious targets, not only in the power sector

Target and vision setting for municipal operations and city-wide energy

Ambition tends to be:

- **Higher:** cities target larger shares of renewables than national counterparts
- **Broader:** cities also set targets in heating, cooling and transport sectors
- **250 cities** worldwide have adopted some form of **100%** renewables target

100% Renewable Energy Targets in Cities, As of Mid-2019

Number of 100% targets
(10 year period aggregate)

370 targets in over
250 cities

14 both
53 municipal
operations
target

303
city-wide
targets

Note: By mid-2019, 370 targets in over 250 cities have been identified. In addition, several 100% target exist in villages as well as provinces around the world. Data included in this figure were compiled by REN21, ICLEI and The Global 100% Renewable Energy Platform with material provided by a variety of stakeholders, including CDP, CAN, C40, IRENA, Sierra Club, Renewable Cities (2018); and may not be comprehensive.

Policies and actions in municipal operations

Advancing renewable energy in municipal operations

- Procuring renewable energy for consumption of municipal operations
- Scaling-up renewable generation on public buildings (e.g. Solar PV, solar thermal)
- Integrating renewable energy in district energy networks and switching municipal fleets to biofuels and EVs
- Using municipal waste and wastewater to generate biogas, biomethane

Cities leading by example, shifting to renewables in municipal operations

Beyond municipal operations

Cities are using regulatory policies to advance renewable energy city-wide

- Regulators and policy-makers: creating environment for **city-wide** renewable in power, heating and cooling
 - Building codes requiring zero-emissions
 - Solar power mandates
- Facilitating renewable deployment for other actors in urban environment (businesses, citizens, communities, places of worships, urban delivery companies)
 - Raising awareness about RE benefits
 - Contribute to knowledge sharing and dialogue

Beyond the city

Cities are champions for renewable energy at the global scale

- Champions, trend setters and advocates at the national level
 - Pushing for higher ambition
 - Proving the viability of renewables
- Inspiring and learning from other cities worldwide, organisation city networks

REN21 RENEWABLES IN CITIES 2019 GLOBAL STATUS REPORT

Cities cannot advance the transition to renewable energy transition alone

Multi-level governance

Cities need the support from national governments to realise renewable energy

- City power and authority over energy issues
 - is often limited, in particular in Asia, Latin America and Middle East
 - cities cannot achieve sustainability alone
- Conflicting/unsupportive national policies
 - building codes, vehicle regulation
 - national fossil-fuel subsidies

Average Annual Subsidies for Fossil Fuel Use in Urban Areas, by Sector, in the OECD and BRICS Countries, 2015-2016

Note: Subsidies for fossil fuel consumption in urban areas were identified for most countries. OECD = Organisation for Economic Cooperation and Development; BRICS = Brazil, Russian Federation, India, Indonesia, China and South Africa. A further USD 27.7 million in subsidies in urban areas of the selected countries goes to fossil fuel use in social and public services (too small to be included in figure).

 **REN21** RENEWABLES IN CITIES 2019 GLOBAL STATUS REPORT

Cities cannot advance renewable energy transition in isolation

Citizen engagement key for the energy transition

Citizens can actively shape the renewable energy infrastructure of their cities

- **Consumer choice**
 - Choosing among suppliers and switching to green
 - Opting for RE tariffs (electricity/heating)
- **Prosumers**
 - Households/businesses generating RE
 - Facilitated by policies and business models such as solar leasing
- **Community renewable energy projects:** not only a rural but have also emerged in cities

Municipal support and cooperation with residents

Municipal governments can gain public trust for renewables and drive ambition

- **Supporting community initiatives**
 - Providing incentives (Fiscal, financial, RE projects quotas)
 - Using the potential of ICT progress (apps, interactive databases)
- **Re-municipalisation/public ownership:** citizens initiatives are often the starting point
- **Participatory governance** is important to gain public trust
 - Opposition to RE projects can be a barrier (“Not In My Backyard”)
 - Participatory planning and governance are tools to include citizens in decision-making

Public support in cities is important to drive the energy transition outside city boundaries

In conclusion

Cities and renewable energy – taking advantage of each other

- Renewable energy in cities
 - Nature of renewable energy empowers cities to become key players in the energy transition
 - Renewables offer cities the opportunity to achieve a wide range of objectives: air pollution, economic growth, etc
- Cities in renewable energy
 - Various roles: target setters, energy consumers & producers, policy makers and regulators, facilitator, etc.
 - Advancing renewable energy in all end-use sectors

From an energy consumer to a change agent of the energy transition

In conclusion

How to take advantage of the opportunities

- Strengthen data on renewable energy in cities
 - Inform decision makers
 - Change historic perception
 - Bridge cities and energy debates
 - Track advancement
- Align policies across the national, sub-national and local level
- Empowering cities: increase the awareness of their role in the energy transition

Better data to inform decision makers in all relevant sectors
