

Global Plan of Action

for Sustainable Energy Solutions in Situations of Displacement

25 September 2018

Supported by:

What is the energy situation in displacement settings?

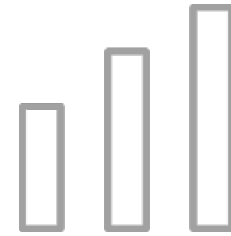

Energy situation in displacement settings

High Forced Migration rates

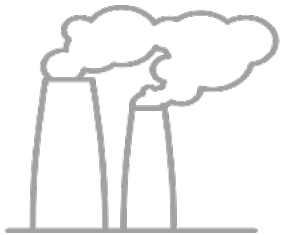

68.5 million displaced by conflict

25+ million displaced by natural disaster annually

90% *no electricity access*

80% *rely on solid fuels for cooking*

\$100+ million on diesel per year

Political push to rethink response for displaced people: GCR, GCM, CRRF

Why do we need a Global Plan of Action?

What is the Global Plan of Action?

The GPA is a **non-binding framework** that will provide **concrete actions** for a more systemic, collaborative approach on sustainable energy in displacement settings.

Vision

Every person affected by conflict and natural disaster has access to affordable, reliable, sustainable and modern energy services by 2030.

Mission

Equip all stakeholders with the capacity and resources to mainstream sustainable energy solutions into programming, with the goal of delivering improved protection, dignity, and energy-related social, environmental, and economic benefits to displaced people.

Key Challenges

Energy is not a formal priority in humanitarian assistance.

Displaced people are not included in national or international energy-access agendas.

Energy in displacement settings is underfunded.

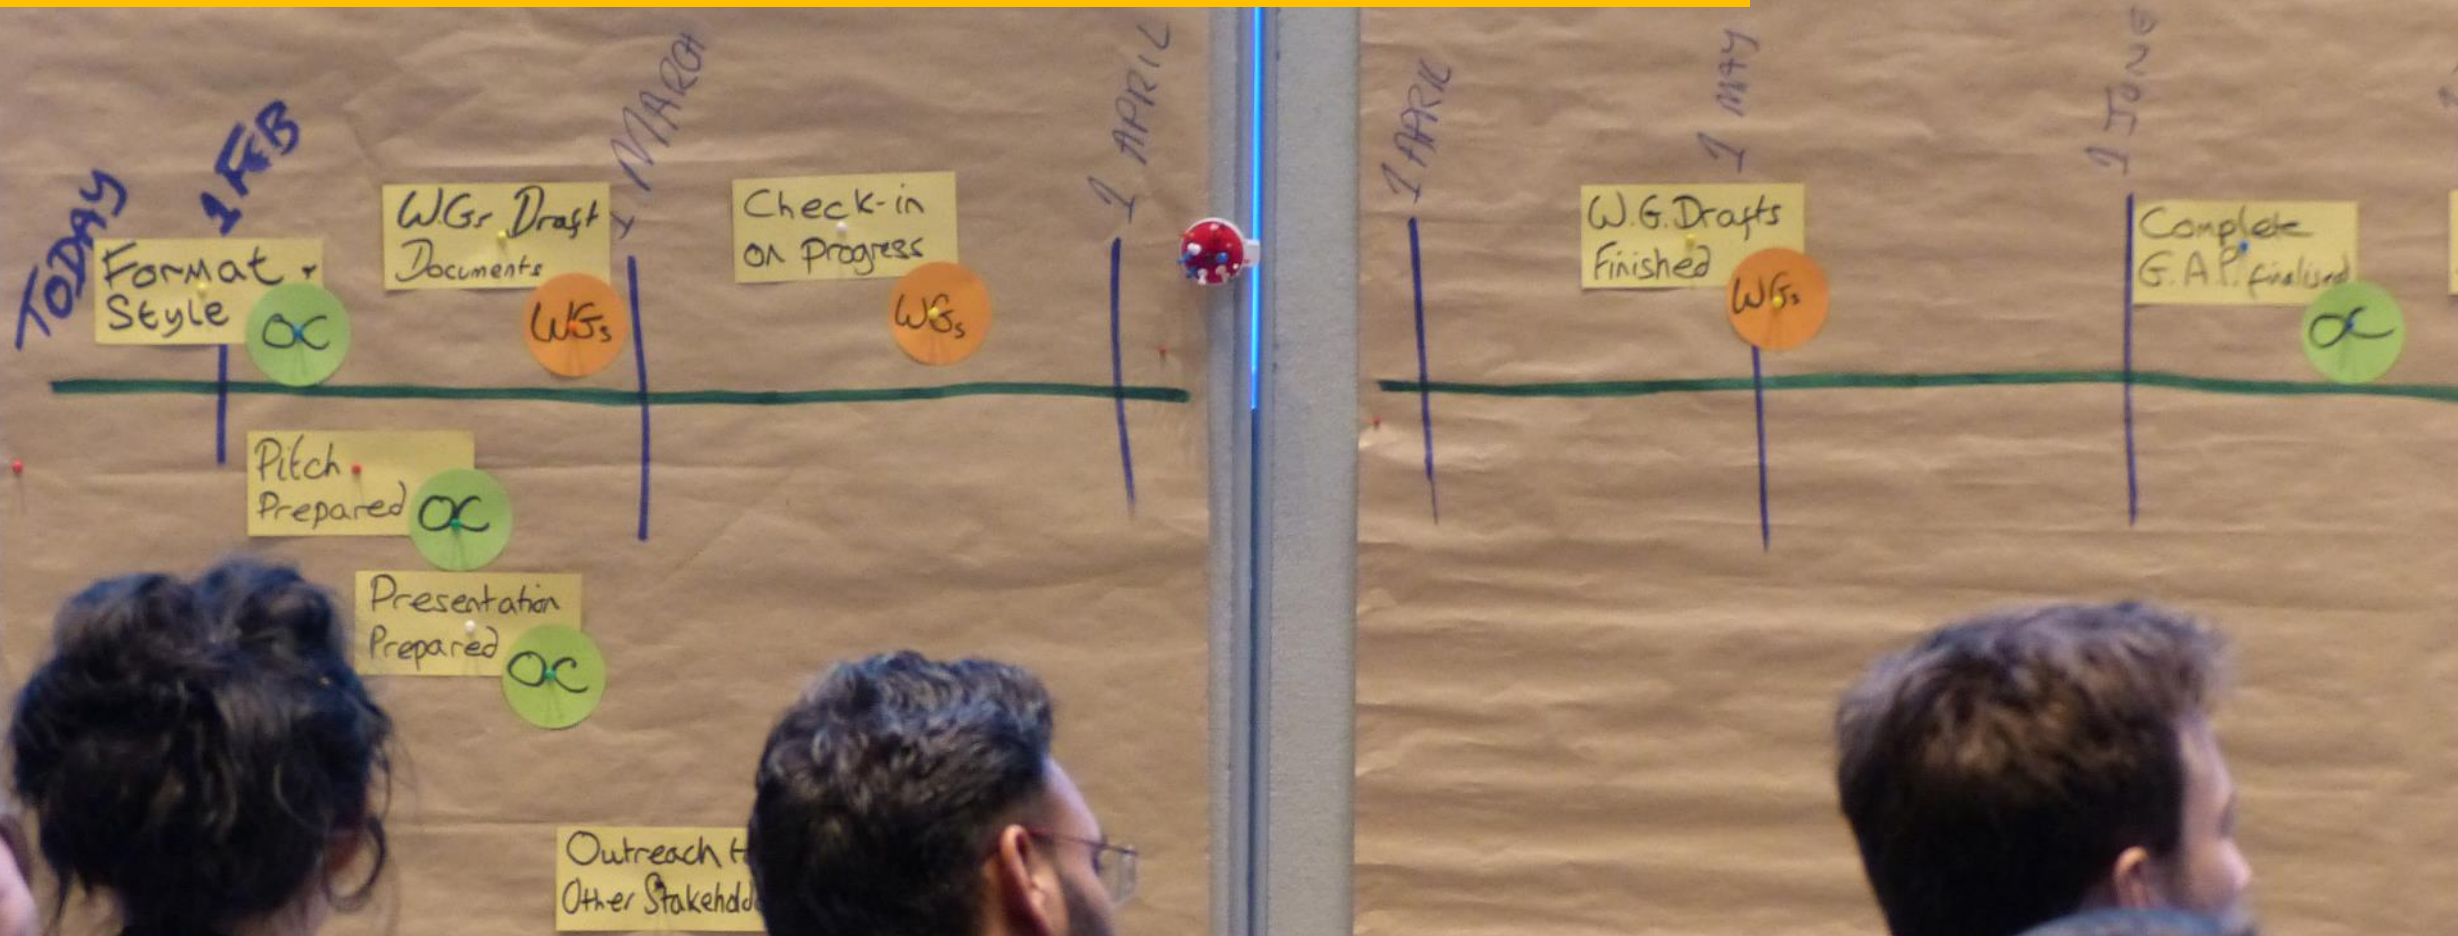

Limited expertise and capacity to plan or implement sustainable energy solutions.

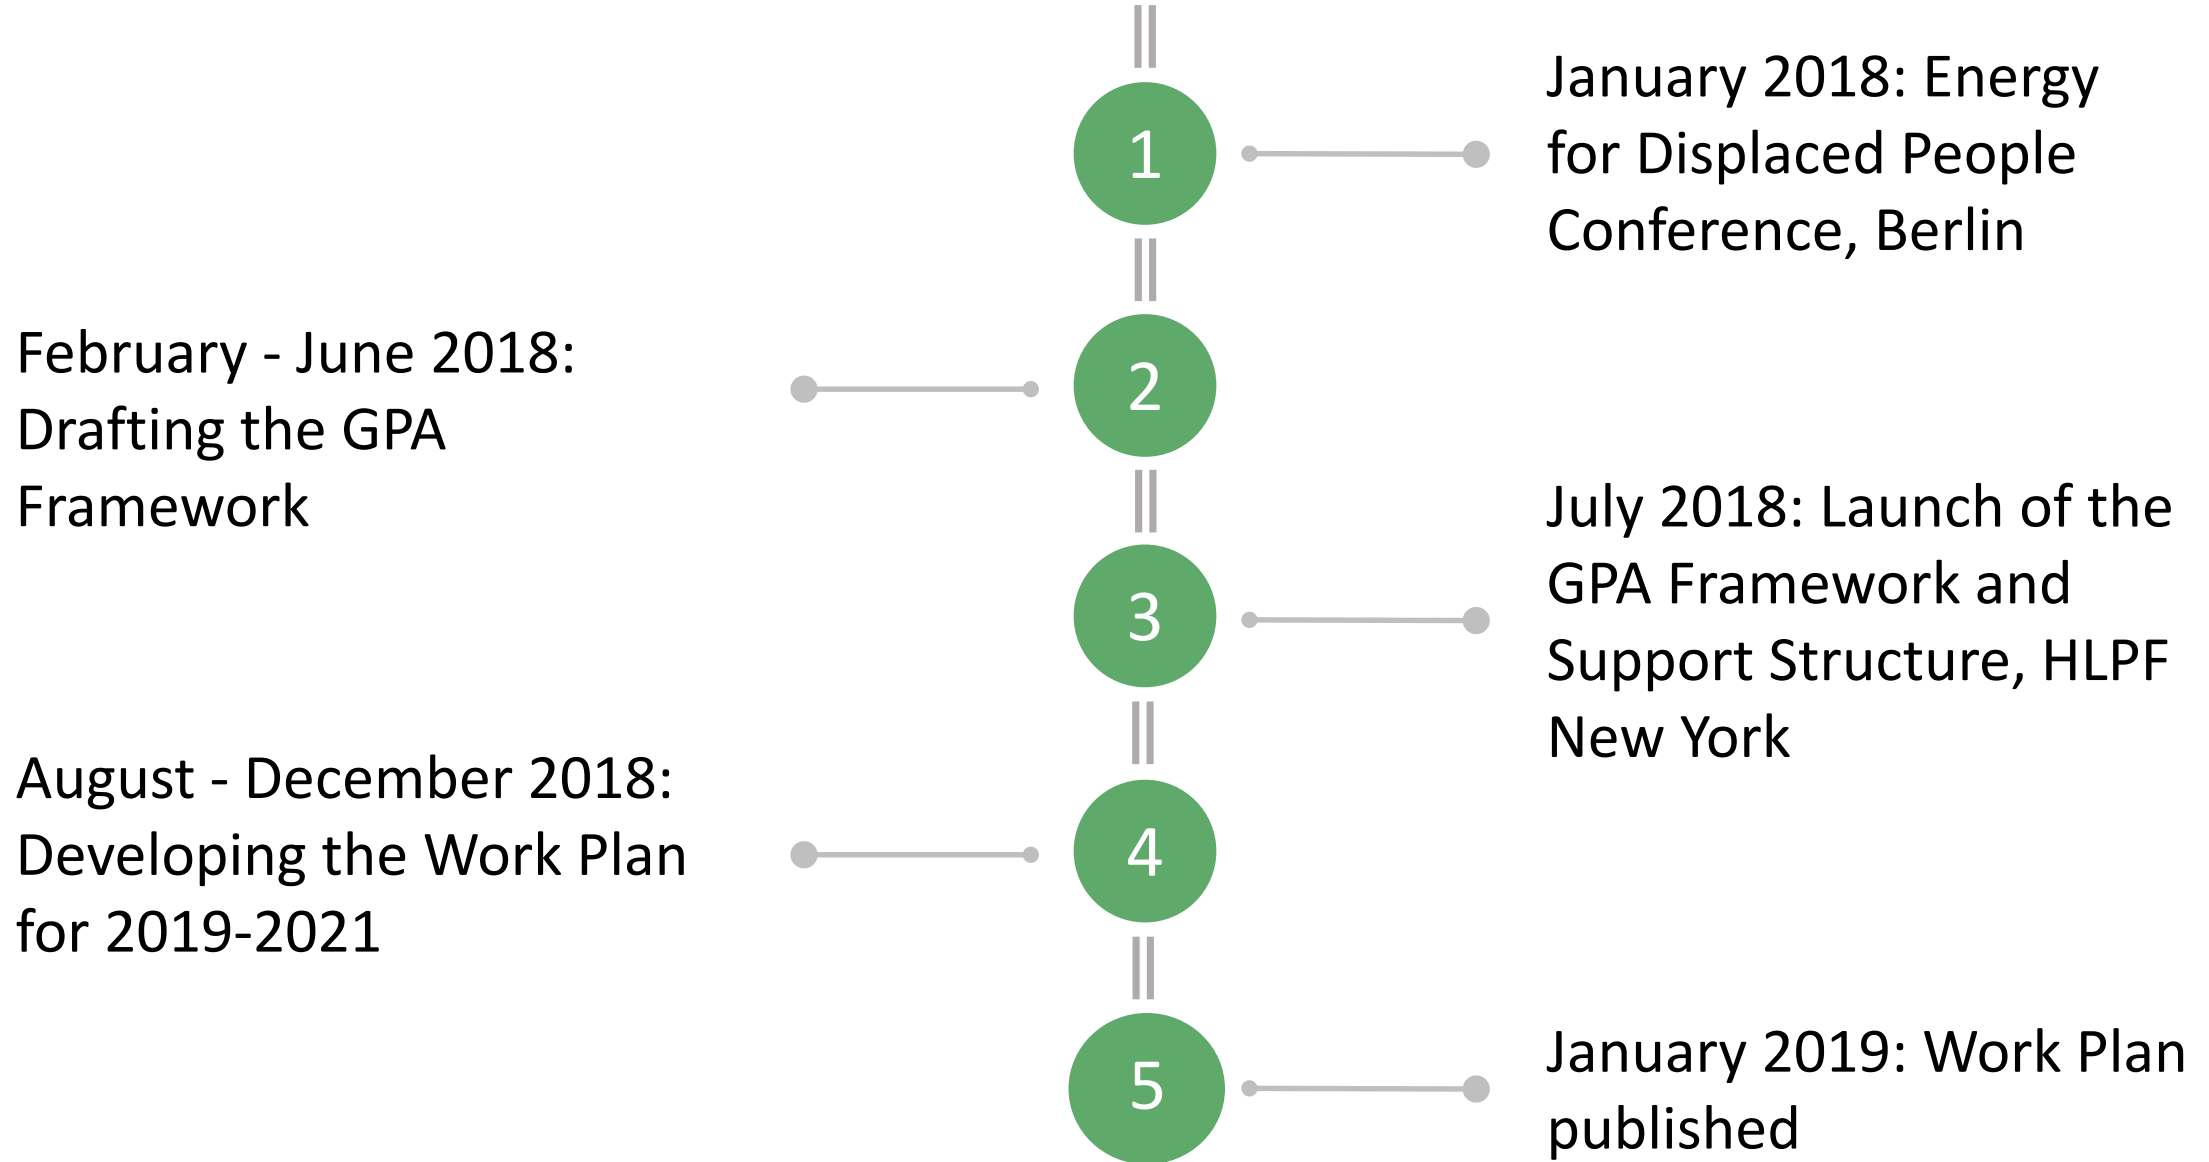

Limited and not widely shared data on humanitarian needs and solutions.

History: From Ideas to Action

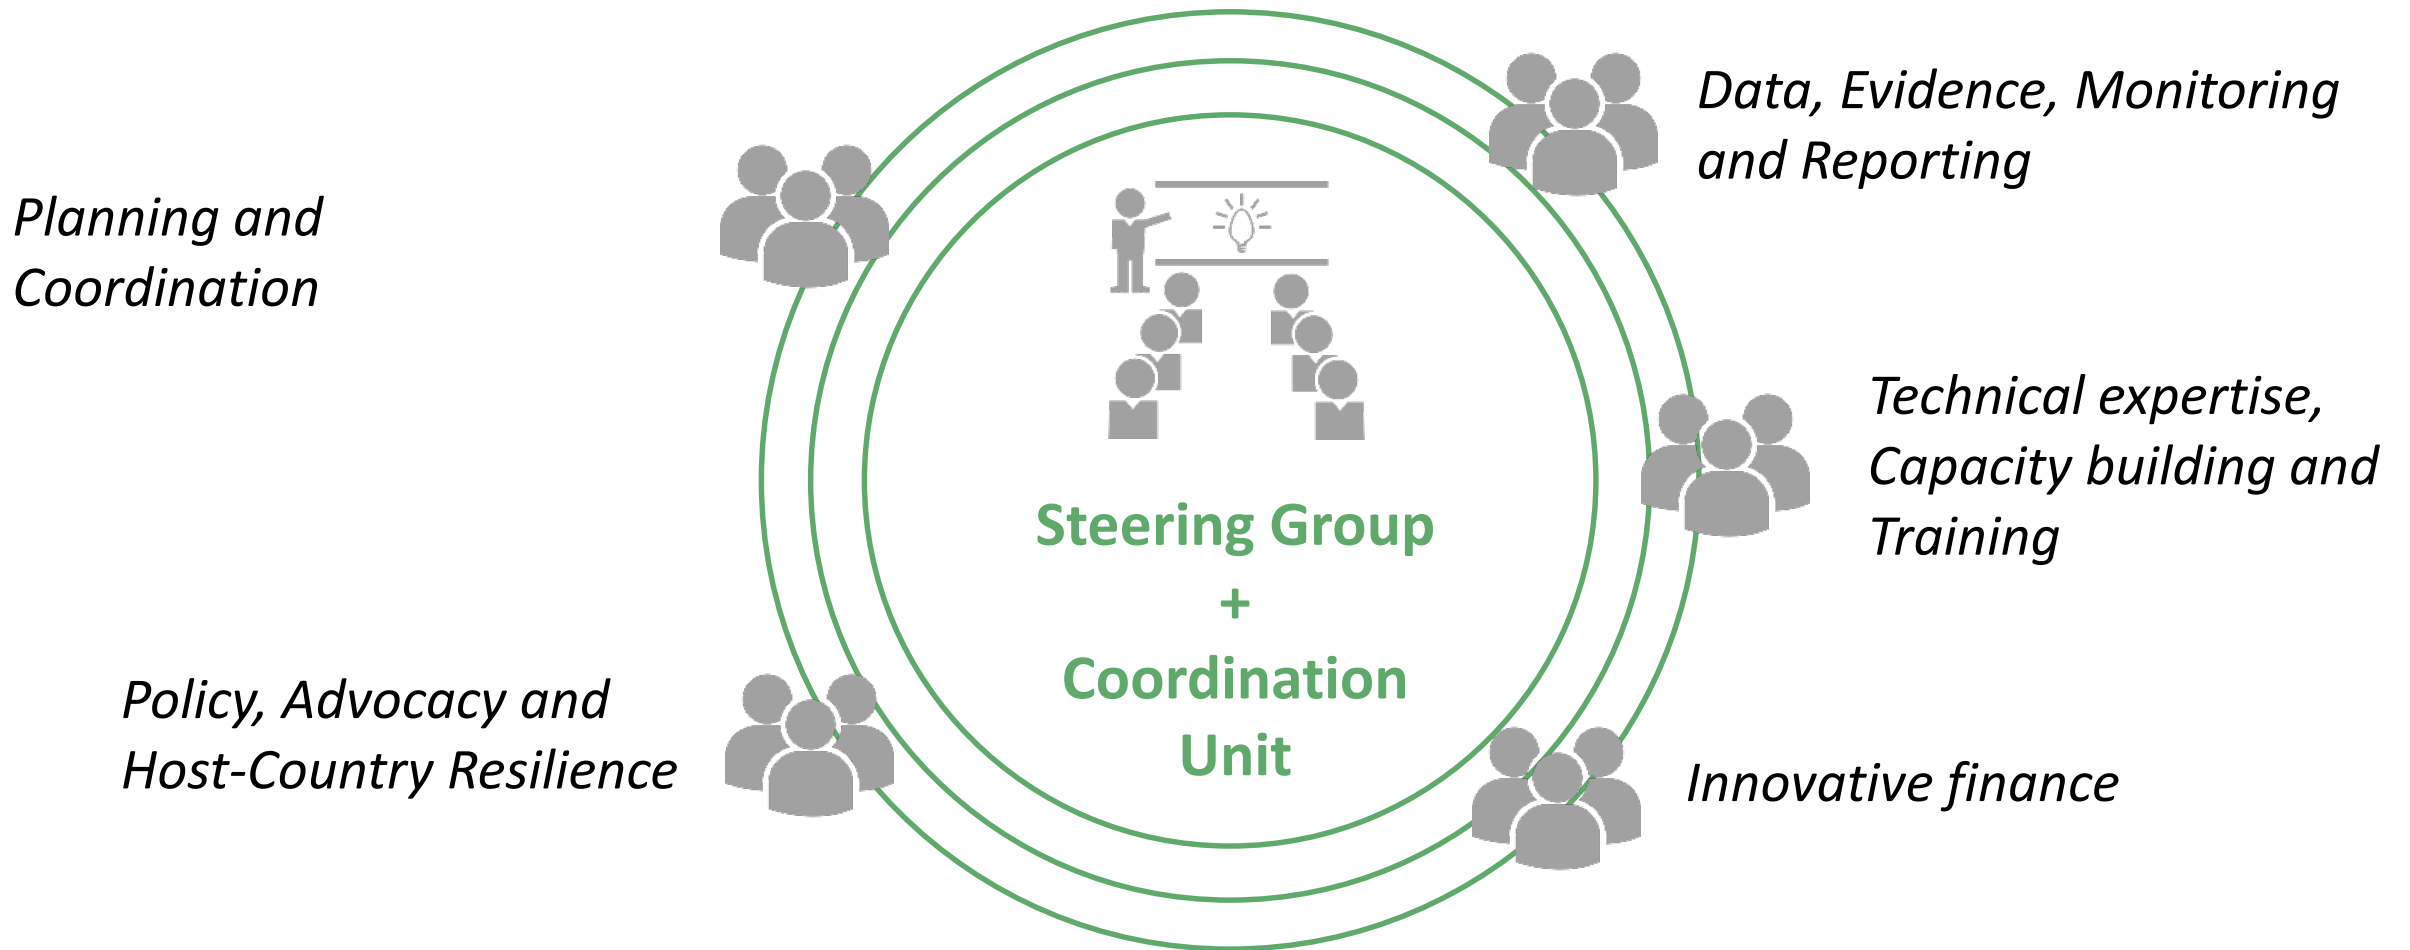

From Ideas to Actions

The GPA Support Structure

Steering Group, Coordination Unit, Working Groups

Steering Group members as of Oct 2018:

*Empowered lives.
Resilient nations.*
